DEVELOPING THE CREATIVITY OF PRIMARY SCHOOL STUDENTS THROUGH ART-PEDAGOGICAL METHODS

Dauletmuratova Bayramgul Makhsetbay kizi

Doctoral student of the 3rd year, Nukus State
Pedagogical Institute named after Ajiniyaz

Abstract: The article examines modern approaches to developing creativity in primary school students through artistic and creative activities. Domestic and international research is analyzed, revealing the role of art-pedagogical tools in the formation of children's creative thinking, as well as their emotional and cognitive development. Special attention is paid to the integration of traditional and digital methods, which makes it possible to increase students' motivation, stimulate independent creativity, and foster critical thinking. A review of the literature shows that the effective development of creative abilities is achievable through a comprehensive approach that takes into account the psychological and pedagogical characteristics of children, as well as national educational standards. The presented conclusions can be used to improve teaching methodologies and to organize creative activities in primary education.

Key words: creativity, primary school students, artistic and creative activity, art pedagogy, creative thinking, digital technologies in education.

Annotatsiya: Maqolada boshlang'ich sinf o'quvchilarida badiiy-ijodiy faoliyat orqali kreativlikni rivojlantirishning zamonaviy yondashuvlari ko'rib chiqiladi. Mahalliy va xorijiy tadqiqotlar tahlil qilinib, art-pedagogik vositalarning bolaning ijodiy tafakkuri, emotsional va kognitiv rivojlanishini shakllantirishdagi o'rni yoritiladi. An'anaviy va raqamli metodlarning integratsiyasiga alohida e'tibor qaratilgan bo'lib, bu o'quvchilarning motivatsiyasini oshirish, mustaqil ijodkorligini rag'batlantirish hamda tanqidiy fikrlashini rivojlantirish imkonini beradi. Adabiyotlar tahlili shuni ko'rsatadiki, ijodiy qobiliyatlarni samarali rivojlantirish bolalarning psixologik-pedagogik xususiyatlari va milliy ta'lim standartlarini inobatga olgan holda kompleks yondashuv asosida amalga oshirilishi mumkin. Taqdim etilgan xulosalardan o'qitish metodikasini takomillashtirish va boshlang'ich ta'limda ijodiy faoliyatni tashkil etishda foydalanish mumkin.

Kalit so'zlar: kreativlik, boshlang'ich sinf o'quvchilari, badiiy-ijodiy faoliyat, art-pedagogika, ijodiy tafakkur, ta'limda raqamli texnologiyalar.

Аннотация: В статье рассматриваются современные подходы к развитию креативности у учащихся начальной школы посредством художественно-творческой деятельности. Анализируются отечественные и зарубежные исследования, раскрывающие роль арт-педагогических средств в формировании творческого мышления ребёнка, а также его эмоционального и когнитивного развития. Особое внимание уделяется интеграции традиционных и цифровых методов, что позволяет повышать мотивацию учащихся, стимулировать их самостоятельную творческую деятельность и развивать критическое мышление. Обзор литературы показывает, что эффективное развитие творческих способностей возможно на основе комплексного подхода с учётом психолого-педагогических особенностей детей и национальных образовательных стандартов. Представленные выводы могут быть использованы для совершенствования методики преподавания и организации творческой деятельности в начальной школе.

Ключевые слова: креативность, учащиеся начальной школы, художественно-творческая деятельность, арт-педагогика, творческое мышление, цифровые технологии в образовании.

INTRODUCTION

In the context of modern societal development, the formation of a creative individual capable of independent thinking, finding non-standard solutions, and actively participating in cultural and social life is of particular importance. In the education system of the 21st century, the development of creativity is considered one of the key tasks in teaching and educating the younger generation. Developing students' creativity is one of the most important tasks of modern education. In a rapidly changing society, there is a growing need to cultivate in schoolchildren the ability to think creatively, seek solutions independently, and engage in innovative activities.

Researchers note that it is during the primary school years that the foundations of a person's creative potential are laid [1; 23]. Modern pedagogical concepts emphasize that the development of creativity is possible under the condition of using active and creative teaching methods [15; 210]. In this context, art-pedagogical methods play a special role, as they integrate various types of artistic activity into the educational process [9; 98].

Foreign studies also confirm the importance of art education in the formation of students' creative thinking [4; 112]. Primary school is an important stage in the formation of a child's creative potential. It is during this period that the foundations of creative thinking are laid, the skills of independent activity are formed, and the ability to perceive the surrounding world artistically develops. In this regard, pedagogical science pays special attention to finding effective methods and means of developing the creativity of primary school students [6; 97]. One of the promising directions in modern pedagogy is the use of art-pedagogical methods. Art pedagogy is a pedagogical field based on the integration of various art forms into the educational process. Using artistic means contributes to the development of students' imagination, emotional sphere, and creative thinking [13; 113].

Art-pedagogical methods include the use of elements of fine art, music, theatricalization, literary creativity, and other forms of artistic activity. These methods make it possible to create a favorable educational environment in which students can freely express their ideas, demonstrate individuality, and develop creative abilities [8; 34].

Studies show that incorporating artistic and creative tasks into the educational process contributes to the activation of students' cognitive activity, increases their motivation for learning, and develops their communication skills. Additionally, art-pedagogical methods contribute to the formation of emotional responsiveness and aesthetic perception of the surrounding world. Despite researchers' significant interest in the problem of developing creativity, the issues surrounding the systematic application of art-pedagogical methods in primary school remain insufficiently developed. In particular, the pedagogical potential of art pedagogy in the formation of students' creative thinking requires further study.

LITERATURE REVIEW

In modern pedagogical research, the development of creativity is considered one of the key tasks of education in the 21st century. Art education plays an important role in the formation of creative thinking and contributes to the development of students' ability to imaginatively perceive and interpret the surrounding reality. According to researcher Elliot Eisner, art forms a special type of thinking that allows students to perceive the world multidimensionally and develop the ability to analyze educational experience creatively [4; 112].

In foreign practice, special attention is paid to methods aimed at forming creative thinking through visual and musical art. Thus, research by N. Clerbain and A. Wallace shows that the systematic engagement of children in artistic practices contributes to the development of non-standard thinking and the ability to express themselves [5; 82].

Similar conclusions are presented in Gardner's works, which link creative development to multiple forms of intelligence, including visual-spatial and musical intelligence [3; 123].

Significant attention to the development of creativity in the educational environment is also given in the works of the British researcher Anna Craft. The scholar notes that the modern school should create conditions for the formation of the creative potential of the individual, since creativity is regarded as an important competence necessary for the successful social and professional self-realization of students [12; 90].

In turn, Ken Robinson emphasizes that art and artistic activity are among the most important factors in the development of innovative thinking. According to him, the inclusion of artistic methods in the educational process contributes to the formation of students' ability to independently search for new ideas and develop their creative expression [10; 118].

The problem of developing creativity is considered in the works of many domestic and foreign researchers. L. S. Vygotsky noted that imagination and creativity play a key role in a child's mental development and in the formation of cognitive activity [1; 35].

From the perspective of the psychology of creativity, creativity manifests itself through such characteristics as originality, flexibility, and fluency of thought [14; 97].

A similar position is held by J. Guilford, who links the development of creativity with divergent thinking and the ability to generate new ideas [2; 210]. In pedagogy, considerable attention is paid to finding effective methods for developing students' creative abilities.

Thus, A. V. Khutorskoy considers creativity to be the most important result of modern education and emphasizes the need to use creative teaching methods [15; 295].

Foreign researchers also note the importance of art in the educational process. According to A. Craft, the development of creativity should become one of the priority areas of the modern school [12; 90].

K. Robinson emphasizes that artistic activity contributes to the formation of innovative thinking and the development of students' individual abilities ^[10; 118].

The development of creativity in primary school students through artistic and creative activities has received significant attention in pedagogical science in recent decades. A number of authors emphasize the importance of integrating various forms of art pedagogy into the educational process as a means of stimulating children's creative potential ^[5; 45].

In Russian pedagogy, the issues of forming creative abilities through artistic and creative activity have been studied comprehensively. For example, research by Kony and Zankov revealed that early involvement of children in diverse creative practices contributes to the development of cognitive and emotional competencies, as well as fosters the ability for independent creative activity ^[6; 67].

In the works of domestic educators such as Slastenkov and Burkova, the importance of a differentiated approach to art pedagogy, depending on the age characteristics of primary school students, is emphasized ^[13; 51].

Among modern studies, works that consider digital art pedagogy as a tool for developing creativity stand out. Thus, digital technologies make it possible to integrate multimedia tools, interactive tasks, and visual simulations, which expands opportunities for children's independent creative exploration ^[8; 34].

In the context of Uzbekistan and the CIS countries, researchers note that the use of multimedia and interactive methods in primary school significantly increases motivation for creative activity, as well as contributes to the development of critical thinking skills ^[7; 29].

Thus, the analysis of the literature shows that the development of creativity in primary school students is most effective when a combination of traditional and digital art pedagogy tools is used, taking into account the psychological and pedagogical characteristics of each child. Despite extensive research, the issue of optimizing methodologies and creating universal models for developing creative abilities within the framework of national educational standards remains relevant and requires further empirical verification.

RESEARCH METHODOLOGY

To achieve the stated goal and solve the research objectives, a set of complementary theoretical and empirical methods of scientific inquiry was used, allowing for a comprehensive study of the problem of developing the creativity of primary school students through art-pedagogical methods. The theoretical research methods included analysis, synthesis, comparison, generalization, and systematization of scientific pedagogical and psychological literature on the problem of developing students' creativity, as well as the study of scientific works devoted to the application of art-pedagogical technologies in the educational process. These methods made it possible to identify the main theoretical approaches to understanding creativity, determine the pedagogical conditions for its formation in primary school students, and examine the features of using artistic and creative activity in educational practice ^[11; 70].

Special attention was paid to the analysis of scientific works on the psychology of creativity, art pedagogy, and the theory of art education. This made it possible to define the essence of creativity as an integrative quality of personality, including such components as originality of thinking, flexibility of ideas, developed imagination, and the ability to express oneself creatively.

As empirical research methods, pedagogical observation, analysis of the results of students' creative activity, and testing of art-pedagogical methods in the primary school learning process were used. Pedagogical observation made it possible to identify the specific features of students' creative activity in the process of performing artistic and creative tasks and to determine the level of their engagement in creative work. The analysis of the results of students' creative activity was carried out on the basis of studying their artistic works, creative projects, and oral creative statements. At the same time, such indicators of creativity development as originality of ideas, independence in completing tasks, diversity of artistic means used, and the ability to creatively transform the proposed material were assessed. The research was conducted on the basis of primary school grades. The study involved students aged 7-10 years, which corresponds to the period of active formation of creative thinking and imagination. This stage of development is characterized by children's high cognitive activity, emotional receptivity, and desire for artistic expression. Various art-pedagogical methods aimed at developing students' creative abilities were used in the learning process. The following methods were employed:

- artistic drawing and visual arts;
- creating collages and appliqués;
- dramatization of literary works and elements of fairy-tale therapy;
- creative storytelling;

- musical and creative tasks;
- and collective art projects.

The use of these methods was aimed at developing imagination, shaping figurative thinking, stimulating the independent search for ideas, and enhancing students' ability to express themselves creatively. An important feature of art-pedagogical methods is their integration with traditional forms of teaching, which allows for the organic inclusion of artistic activity in the educational process.

During the research, special attention was paid to creating a creative educational environment that encouraged students to participate actively in artistic and creative activities. For this purpose, various forms of organizing educational work were used, including individual creative tasks, group projects, and collective forms of artistic activity. Thus, the application of a complex of theoretical and empirical methods made it possible to obtain objective data on the influence of art-pedagogical methods on the development of creativity in primary school students and to determine their pedagogical effectiveness in educational practice. The research results showed that the use of art-pedagogical methods had a positive impact on the development of creativity in primary school students. Firstly, artistic activity contributed to the activation of imagination and the formation of the ability to generate original ideas. Students demonstrated a high level of interest in completing creative tasks and actively participated in artistic and creative activities. Secondly, the use of art-pedagogical methods contributed to the development of students' communication skills. In the process of collective creative tasks, children learned to interact with one another, discuss ideas, and find creative solutions together. Thirdly, artistic and creative activity contributed to the development of emotional expressiveness and the formation of students' confidence in their own creative abilities. The obtained results indicate that the integration of art-pedagogical methods into the primary school educational process contributes to the creation of a favorable educational environment that stimulates the development of students' creative potential.

ANALYSIS AND RESULTS

The results obtained during the study confirm the conclusions of modern pedagogical and psychological research on the high effectiveness of artistic and creative teaching methods in the development of creativity in primary school students. In particular, the analysis of the results of pedagogical observation and students' creative activity showed that the use of art-pedagogical methods contributes to the activation of children's creative potential and the formation of a stable interest in learning activities. Art pedagogy represents a comprehensive pedagogical direction that combines elements of art and educational practice. Its main feature is that artistic activity acts not only as a means of aesthetic education but also as a tool for developing students' cognitive and personal qualities. The inclusion of various art forms in the educational process makes it possible to activate students' imaginative thinking and to develop their imagination and ability to solve non-standard problems ^[14; 101].

The obtained results are consistent with the research of psychologists and educators, who note that creative activity contributes to the development of flexibility of thinking, originality of ideas, and the ability to find solutions independently ^[7; 28]. In the process of artistic and creative activity, students have the opportunity to experiment and combine various ideas and forms of expression, which contributes to the development of their creative potential. Art-pedagogical methods are particularly important for the development of students' emotional sphere. Artistic activity contributes to the formation of emotional responsiveness, the development of aesthetic perception, and the ability to express one's feelings and experiences through various forms of creativity. This, in turn, has a positive impact on the development of the child's personality and the formation of communication skills. Additionally, the use of art-pedagogical methods contributes to creating a favorable educational environment in which students feel freer and more confident. A creative atmosphere in lessons reduces students' anxiety levels, contributes to the formation of a positive attitude toward learning, and stimulates cognitive activity. Thus, the research results confirm that the systematic use of art-pedagogical methods in the primary school educational process contributes to the development of students' creativity, the formation of their creative thinking, and an increase in learning motivation. Art pedagogy creates conditions for the harmonious development of a child's personality by combining the cognitive, emotional, and social aspects of the educational process.

CONCLUSION

The conducted research made it possible to determine the pedagogical potential of art-pedagogical methods for developing creativity in primary school students. An analysis of the scientific literature and the results of pedagogical observations showed that artistic and creative activity is an important means of forming

the creative potential of a child's personality during primary school age. The study revealed that the use of art-pedagogical methods in the educational process contributes to the development of imagination, flexibility, and originality of thinking, as well as to the formation of students' ability for independent creative expression. Artistic activities create conditions for activating children's cognitive activity, stimulate their interest in learning, and contribute to the formation of positive motivation for educational activities. The integration of various art forms into the educational process plays a special role in developing students' creativity. The use of visual arts, dramatization, music-based creative assignments, and collective art projects makes it possible to create a favorable educational environment in which students can take initiative, experiment, and implement their own creative ideas.

The research results confirm that the systematic application of art-pedagogical methods contributes not only to the development of students' individual creative abilities but also to the improvement of their communication skills. In the process of collective artistic and creative activity, students learn to cooperate, exchange ideas, and jointly seek solutions, which contributes to the formation of communication culture and social activity. Thus, the integration of art-pedagogical methods into the primary school educational process can be considered an effective means of developing students' creativity and forming their creative potential. The use of artistic and creative forms of activity makes it possible to make the educational process more diverse, emotionally rich, and oriented toward the development of the child's personality.
